## FOR IMMEDIATE RELEASE

### **Harper Power Products adds Global Emissions Systems (GESi®) to their product portfolio**

**GESi® is the leading emission control technology that reduces smog and greenhouse gas emissions.**

**Toronto, Ontario** - Paul and Steve Harper, owners of Harper Group Inc., the parent company of Harper Power Products, are pleased to announce the addition of Global Emissions Systems (GESi®) to the Harper Power Products portfolio of world leading products.

GESi® is a Canadian company, located in Whitby, Ontario that designs, develops and manufactures the finest emissions control technology in the world. As the new Ontario distributor Harper Power Products can now offer emission reduction solutions to their customers in all sectors from mining, construction and power generation to transits and municipalities and provide them with visible and measurable emission reduction results.

The GESi® Dry Selective Catalyst (DSC) technology leads the marketplace by reducing up to 99% of the Carbon Monoxide (CO), Hydrocarbon (HC), and Nitrogen Oxides (NOx) from fossil fuel combustion engines. Unlike other technologies, GESi® is recyclable and doesn't add toxic emissions to the environment.

John Cosgrove, President and Chief Operating Officer of Harper Power Products says, "The introduction of GESi®, a field proven and global leading technology is an exciting venture for the Harper organization. Over the past several years our focus has expanded to provide our customers with not only world leading brands but also emission consultations and exhaust after treatment advice. Our partnership with GESi® is a testament to our initiative to be environmentally conscious and to be able to provide our customers with a demonstrated technology to reduce their carbon footprint."

John Cosgrove is also pleased to announce that Scott Hosmer will assume the role of Global Emissions Systems Business Development Manager to oversee the launch and introduction for Harper Power Products to the business and industry segments it serves. GESi® products and emission reduction consultations will be available and supported through all Harper locations in Ontario.
